## Dialogue as a means to understanding and empathy

### Reflections on the transdisciplinary EcoArtLab Residency

Wie verbindet der Klimawandel das Gangesdelta mit den Schweizer Alpen? Das Team aus Kunst und Wissenschaft der transdisziplinären EcoArtLab Residency präsentiert seine Ergebnisse aus der halbjährigen Recherche und reflektiert im Dialog mit dem EcoArtLab über Erkenntnisse, Erfahrungen und Learnings.

**Speaker:** Alisha Dutt Islam, Christa Herrmann & Nora Gailer (Terravibe)

**Moderation:** Johanna Paschen, EcoArtLab

**Host:** Institute Practices & Theories in the Arts

**Hinweis:** Vortrag auf Englisch.

How does climate change connect the Ganges Delta with the Swiss Alps? The EcoArtLab organised a residency in collaboration with the mLAB (UniBe), the Ballenberg Open-Air Museum, and Helvetas. The SNSF research project "Relational Encounters between the Arts and Climate Research" examined the residency on the basis of its institutional framework and strategies and methodological approaches within the collaboration of the residents.

The collective *Terravibe* merges two geographical points in relation to its soil: The Swiss Alps, freshwater reservoir of Europe – threatened by melting glaciers and drought and the Ganges Delta, the largest mangrove forests in the world – threatened by reoccurring cyclones and floods. The residents will report on their artistic-scientific research and reflect in dialogue with the EcoArtLab on their experiences, results and learnings.
